

Extracting and Visualizing Stock Data

Description

Extracting essential data from a dataset and displaying it is a necessary part of data science; therefore individuals can make correct decisions based on the data. In this assignment, you will extract some stock data, you will then display this data in a graph.

Define Graphing Function

In this section, we define the function make_graph . You don't have to know how the function works, you should only care about the inputs. It takes a dataframe with stock data (dataframe must contain Date and Close columns), a dataframe with revenue data (dataframe must contain Date and Revenue columns), and the name of the stock.

```
def make_graph(stock_data, revenue_data, stock):
In [3]:
            fig = make_subplots(rows=2, cols=1, shared_xaxes=True, subplot_titles=("Historical Share
            stock_data_specific = stock_data[stock_data.Date <= '2021--06-14']</pre>
            revenue data specific = revenue data[revenue data.Date <= '2021-04-30']
            fig.add trace(go.Scatter(x=pd.to datetime(stock data specific.Date, infer datetime format
            fig.add_trace(go.Scatter(x=pd.to_datetime(revenue_data_specific.Date, infer_datetime_form
            fig.update_xaxes(title_text="Date", row=1, col=1)
            fig.update_xaxes(title_text="Date", row=2, col=1)
            fig.update_yaxes(title_text="Price ($US)", row=1, col=1)
            fig.update_yaxes(title_text="Revenue ($US Millions)", row=2, col=1)
            fig.update_layout(showlegend=False,
            height=900,
            title=stock,
```

```
xaxis_rangeslider_visible=True)
fig.show()
```

Question 1: Use yfinance to Extract Stock Data

Using the Ticker function enter the ticker symbol of the stock we want to extract data on to create a ticker object. The stock is Tesla and its ticker symbol is TSLA.

```
In [4]: tesla = yf.Ticker('TSLA')
```

Using the ticker object and the function history extract stock information and save it in a dataframe named tesla_data. Set the period parameter to max so we get information for the maximum amount of time.

```
In [5]: tesla_data = tesla.history(period="max")
```

Reset the index using the reset_index(inplace=True) function on the tesla_data DataFrame and display the first five rows of the tesla_data dataframe using the head function. Take a screenshot of the results and code from the beginning of Question 1 to the results below.

```
In [6]: tesla_data.reset_index(inplace=True)
    tesla_data.head()
```

Out[6]:		Date	Open	High	Low	Close	Volume	Dividends	Stock Splits
	0	2010-06-29	3.800	5.000	3.508	4.778	93831500	0	0.0
	1	2010-06-30	5.158	6.084	4.660	4.766	85935500	0	0.0
	2	2010-07-01	5.000	5.184	4.054	4.392	41094000	0	0.0
	3	2010-07-02	4.600	4.620	3.742	3.840	25699000	0	0.0
	4	2010-07-06	4.000	4.000	3.166	3.222	34334500	0	0.0

Question 2: Use Webscraping to Extract Tesla Revenue Data

Use the requests library to download the webpage https://www.macrotrends.net/stocks/charts/TSLA/tesla/revenue. Save the text of the response as a variable named html_data .

```
In [7]: url = 'https://www.macrotrends.net/stocks/charts/TSLA/tesla/revenue'
html_data = requests.get(url).text
```

Parse the html data using beautiful soup.

```
In [8]: soup = BeautifulSoup(html_data,"html5lib")
```

Using BeautifulSoup or the read_html function extract the table with Tesla Quarterly

Revenue and store it into a dataframe named tesla_revenue . The dataframe should have columns

Date and Revenue.

7/11/22, 9:02 PM

▶ Click here if you need help locating the table

```
In [9]: tesla_revenue = pd.DataFrame(columns=['Date', 'Revenue'])
for table in soup.find_all('table'):
    if ('Tesla Quarterly Revenue' in table.find('th').text):
        rows = table.find_all('tr')

    for row in rows:
        col = row.find_all('td')

    if col != []:
        date = col[0].text
        revenue = col[1].text.replace(',','').replace('$','')
        tesla_revenue = tesla_revenue.append({"Date":date, "Revenue":revenue}, ignore)
```

Execute the following line to remove the comma and dollar sign from the Revenue column.

```
In [10]: tesla_revenue["Revenue"] = tesla_revenue['Revenue'].str.replace(',|\$',"")

/tmp/wsuser/ipykernel_164/349343550.py:1: FutureWarning: The default value of regex will chan ge from True to False in a future version.
    tesla_revenue["Revenue"] = tesla_revenue['Revenue'].str.replace(',|\$',"")
```

Execute the following lines to remove an null or empty strings in the Revenue column.

```
In [11]: tesla_revenue.dropna(inplace=True)
    tesla_revenue = tesla_revenue[tesla_revenue['Revenue'] != ""]
```

Display the last 5 row of the tesla_revenue dataframe using the tail function. Take a screenshot of the results.

```
In [12]: tesla_revenue.tail()
```

```
        Out[12]:
        Date
        Revenue

        46
        2010-09-30
        31

        47
        2010-06-30

        46

        51
        2009-06-30
        27
```

Question 3: Use yfinance to Extract Stock Data

Using the Ticker function enter the ticker symbol of the stock we want to extract data on to create a ticker object. The stock is GameStop and its ticker symbol is GME.

```
In [13]: gme = yf.Ticker('GME')
```

Using the ticker object and the function history extract stock information and save it in a dataframe named gme_data . Set the period parameter to max so we get information for the maximum amount of time.

```
In [14]: gme_data = gme.history(period='max')
```

Reset the index using the <code>reset_index(inplace=True)</code> function on the <code>gme_data</code> DataFrame and display the first five rows of the <code>gme_data</code> dataframe using the <code>head</code> function. Take a screenshot of the results and code from the beginning of Question 3 to the results below.

```
In [15]: gme_data.reset_index(inplace=True)
    gme_data.head()
```

Out[15]:		Date	Open	High	Low	Close	Volume	Dividends	Stock Splits
	0	2002-02-13	6.480514	6.773400	6.413184	6.766667	19054000	0.0	0.0
	1	2002-02-14	6.850829	6.864295	6.682504	6.733001	2755400	0.0	0.0
	2	2002-02-15	6.733001	6.749833	6.632006	6.699336	2097400	0.0	0.0
	3	2002-02-19	6.665671	6.665671	6.312189	6.430017	1852600	0.0	0.0
	4	2002-02-20	6.463681	6.648838	6.413183	6.648838	1723200	0.0	0.0

Question 4: Use Webscraping to Extract GME Revenue Data

Use the requests library to download the webpage https://cf-courses-data.s3.us.cloud-object-storage.appdomain.cloud/IBMDeveloperSkillsNetwork-PY0220EN-SkillsNetwork/labs/project/stock.html. Save the text of the response as a variable named html_data.

```
In [16]: url = 'https://www.macrotrends.net/stocks/charts/GME/gamestop/revenue'
   html_data = requests.get(url).text
```

Parse the html data using beautiful soup.

```
In [17]: soup = BeautifulSoup(html_data,"html5lib")
```

Using BeautifulSoup or the read_html function extract the table with GameStop Quarterly Revenue and store it into a dataframe named gme_revenue. The dataframe should have columns Date and Revenue. Make sure the comma and dollar sign is removed from the Revenue column using a method similar to what you did in Question 2.

► Click here if you need help locating the table

```
In [18]: gme_revenue = pd.DataFrame(columns=['Date', 'Revenue'])
for table in soup.find_all('table'):
```

```
if ('GameStop Quarterly Revenue' in table.find('th').text):
    rows = table.find_all('tr')

for row in rows:
    col = row.find_all('td')

if col != []:
    date = col[0].text
    revenue = col[1].text.replace(',','').replace('$','')

    gme_revenue = gme_revenue.append({"Date":date, "Revenue":revenue}, ignore_ind)
```

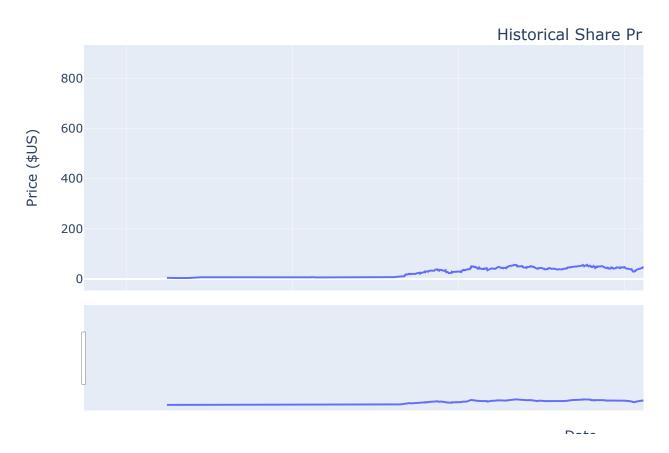

Display the last five rows of the <code>gme_revenue</code> dataframe using the <code>tail</code> function. Take a screenshot of the results.

Question 5: Plot Tesla Stock Graph

Use the <code>make_graph</code> function to graph the Tesla Stock Data, also provide a title for the graph. The structure to call the <code>make_graph</code> function is <code>make_graph(tesla_data, tesla_revenue, 'Tesla')</code>. Note the graph will only show data upto June 2021.

```
In [20]: make_graph(tesla_data[['Date','Close']], tesla_revenue, 'Tesla')
```

Tesla

Question 6: Plot GameStop Stock Graph

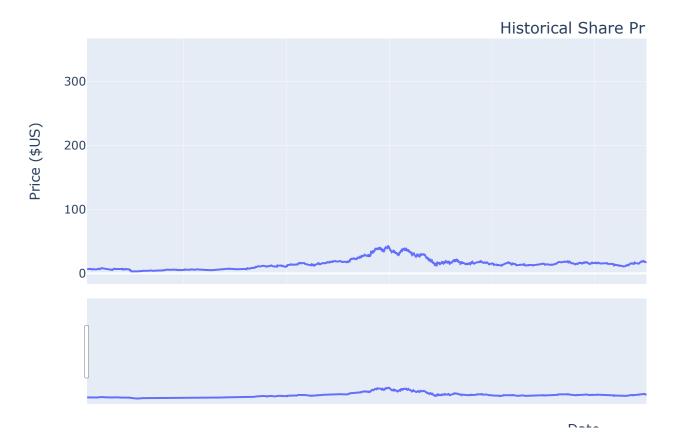

Use the make_graph function to graph the GameStop Stock Data, also provide a title for the graph. The

7/11/22, 9:02 PM FINAL ASSIGNMENT

structure to call the make_graph function is make_graph(gme_data, gme_revenue, 'GameStop'). Note the graph will only show data upto June 2021.

```
In [21]: make_graph(gme_data[['Date','Close']], gme_revenue, 'GameStop')
```

GameStop
